#### ULTRATINE™ Forehead Device Instructions for Use

**DESCRIPTION**  
The ULTRATINE™ Forehead Device is a bioabsorbable fixation implant. This device is SINGLE USE ONLY and is supplied sterile. An instrument kit specific for this device is packaged and supplied separately.

**INDICATIONS**  
The ULTRATINE Forehead Device is intended for use in superioosteal browplasty surgery. The ULTRATINE Forehead Device is specifically indicated for use to the sub-dens to the cranial bone in browplasty.

**CONTRAINDICATIONS**  
1. Patients appearing to have very thin bones which might imply an inadequate cranial thickness for the ULTRATINE Forehead Device, bone post width extends to a depth of 3.75 mm. The drilled hole extends to a depth of 3.95 mm +0,05, -0,0 (max 4.00 mm).  
2. Situations where internal fixation is otherwise contraindicated (e.g. infection).  
3. Thin, atrophic scalp.  
4. Any known allergy or foreign-body sensitivities to plastic biomaterial, such as PLA/PGA.

**LABELING, PACKAGING AND STERILIZATION**  
The ULTRATINE Forehead Device is sterilized by gamma irradiation. **DO NOT RESTERILIZE this device. Implant should be accepted only if it factory packaging and labeling are intact.** Do not use if packaging shows evidence of punctures, tampering, water contamination or other damage.

**STORAGE INSTRUCTIONS**  
1. Store at room temperature (15 to 24 °C or 60 to 75 °F) in a dry place out of direct sunlight. Do not use beyond the expiration date listed on the label.

**INSTRUCTIONS FOR USE (for endoscopic or open techniques)**  
1. Prior to implant usage, verify introspectively that the scalp thickness is appropriate for the ULTRATINE Forehead implants.  
2. Make incisions large enough to allow insertion of the ULTRATINE Forehead Device without bending during placement, approximately 20 mm.  
3. Perform the dissection in the usual fashion, making sure to achieve adequate release.  
4. To minimize the risk of creating a full thickness canal from the Coapt Systems Forehead drill bit, verify that the hole position is medial to the temporal fissure and anterior to the coronal suture (Figure 1). Avoid the sagittal sinus at midline.  
5. Plan the cranial hole placement such that the implant will ultimately lie under hair bearing tissue, typically, for sagittal, paramedian incisions, the implant lies somewhat lateral and/or anterior to the incision. For coronal or transverse incisions, the implant lies anterior to the incision.  
6. Prepare the cranial bone using a Coapt Systems Forehead drill bit (Figure 2) applied perpendicular to the bone. **After drilling, check that no residual loose bone material is present in the drill hole.**  
7. Remove the ULTRATINE Forehead Device from the package using the Coapt Systems Forehead Insertion Tool. Properly align the tool with the ULTRATINE Forehead Device to avoid damage (Figure 3).  
8. Utilizing the insertion tool, align the post of the device perpendicular to and within the center of the hole before pushing straight down (Figure 4).  
9. With moderate pressure, insert the ULTRATINE Forehead Device into the prepared site until the device platform is resting on the cranium (Figure 5).  
10. Remove the ULTRATINE Forehead Device from the insertion tool. **The device cannot be removed from the hole and reused.**  
11. Perform the brow elevation and apply pressure to the scalp to assist repositioning of the tissue by the device (Figure 6).  
12. If a drain is used, manipulate the subcutaneous portion so that it is a maximal distance from the implant.  
13. Use caution during skin closure to avoid elevating the scalp tissue off the implant.  
14. A gentle pressure dressing may be appropriate upon completion of the case.

**PRECAUTIONS**  
1. The implant ideally lies under hair bearing scalp at the conclusion of the procedure. Placement under forehead or alopecia skin may lead to unacceptable visibility of the device prior to absorption.

2. The patient is to be informed of possible adverse effects including palpability of the device prior to resection, discomfot, and surgical risks. Tenderness and visible fullness over the device for several months has been noted, especially in patients with thin scalps. These symptoms and/or wound problems may lead to a decision to surgically remove the device prior to its full resolution.

3. Local cyst and/or sinus formation may occur and may be treated by aspiration or device removal.

4. High speed drilling (approximately 1000 rpm and greater) and repeat drilling may create holes that are wider than intended for a tight grip of the ULTRATINE Forehead Device. Single pass, low speed drilling reduces the occurrence of this issue.

5. Avoid any movement of the scalp, which may dislodge the tissue from the tines.

6. Support the head when turning or moving the patient.

7. The patient is to be informed of possible adverse effects including palpability of the device prior to resection, discomfot, and surgical risks. Tenderness and visible fullness over the device for several months has been noted, especially in patients with thin scalps. These symptoms and/or wound problems may lead to a decision to surgically remove the device prior to its full resolution.

8. Local cyst and/or sinus formation may occur and may be treated by aspiration or device removal.

9. Incomplete insertion of the device in the cranial bone may result in inadvertent anchorage.

10. Patients should be instructed to avoid sports or trauma to the head during healing.

11. Contour irregularities of the skin may be noticeable overlaying the ULTRATINE Forehead Device, especially in non hair-bearing areas.

**ADVERSE EFFECTS**  
Material sensitivity/allergic reactions in patients following surgery should be reported. Implantation of foreign materials in tissues can result in histological reactions. In one case, the device may result in granuloma or become encapsulated. If granuloma or encapsulation is suspected, treatment is recommended.

**Caution:** Federal (USA) restricts this device to sale, distribution, or use by or on the order of a physician.

### DANSK

#### ULTRATINE™ pandeenhed-anordning Brugsanvisning

**BESKRIVELSE**  
ULTRATINE™ pandeenhed-anordning er et bioresorberbar fikseringsimplantat. Anordningen er KUN BEREGNET TIL ENGANGSBRUG og leveres stéril. En instruktionsark, der er spesielt beregnet til denne anordning, pakkes og leveres separat.

**INDIKATIONER**  
ULTRATINE pandeenhed-anordning er beregnet til anvendelse ved superioosteal plastiskning (pandeflet). ULTRATINE pandeenhed-anordning er spesielt beregnet til anvendelse ved fiksation af subdens til trækknebel med pandeflet.

**KONTRAINDIKASJONER**  
1. Patientene der ikke har til at have meget tynde knogler, hvilket muligvis betyder utstrækkelig kranietypikkelse til ULTRATINE pandeenhed-anordningens knoglefest, der har en dybde på 3,75 mm. Det boret hul har en dybde på 3,95 mm +0,05, -0,0 (maks. 4,00 mm);  
2. Situasjoner hvor internt fiksjon ellers er kontraindikert (f.eks. infeksjon).  
3. Tynd, atrofisk skall.  
4. Enhver kendt allergi eller fremmedlegemeletsomhet over plastisk biomateriale, som f.eks. PLA/PGA.

**LABELING, PACKAGING AND STERILIZATION**  
The ULTRATINE Forehead Device is sterilized by gamma irradiation. **DO NOT RESTERILIZE this device. Implant should be accepted only if it factory packaging and labeling are intact.** Do not use if packaging shows evidence of punctures, tampering, water contamination or other damage.

**STORAGE INSTRUCTIONS**  
1. Større på romtemperatur (15 til 24 °C or 60 til 75 °F) i en tørr sted uten direkte sollys. Do not use beyond the expiration date listed on the label.

**INSTRUCTIONS FOR USE (for endoscopic or open techniques)**  
1. Prior to implant usage, verify introspectively that the scalp thickness is appropriate for the ULTRATINE Forehead implants.

2. Make incisions large enough to allow insertion of the ULTRATINE Forehead Device without bending during placement, approximately 20 mm.

3. Perform the dissection in the usual fashion, making sure to achieve adequate release.

4. To minimize the risk of creating a full thickness canal from the Coapt Systems Forehead drill bit, verify that the hole position is medial to the temporal fissure and anterior to the coronal suture (Figure 1). Avoid the sagittal sinus at midline.

5. Plan the cranial hole placement such that the implant will ultimately lie under hair bearing tissue, typically, for sagittal, paramedian incisions, the implant lies somewhat lateral and/or anterior to the incision. For coronal or transverse incisions, the implant lies anterior to the incision.

6. Prepare the cranial bone using a Coapt Systems Forehead drill bit (Figure 2) applied perpendicular to the bone. **After drilling, check that no residual loose bone material is present in the drill hole.**

7. Remove the ULTRATINE Forehead Device from the package using the Coapt Systems Forehead Insertion Tool. Properly align the tool with the ULTRATINE Forehead Device to avoid damage (Figure 3).

8. Utilizing the insertion tool, align the post of the device perpendicular to and within the center of the hole before pushing straight down (Figure 4).

9. With moderate pressure, insert the ULTRATINE Forehead Device into the prepared site until the device platform is resting on the cranium (Figure 5).

10. Remove the ULTRATINE Forehead Device from the insertion tool. **The device cannot be removed from the hole and reused.**

11. Perform the brow elevation and apply pressure to the scalp to assist repositioning of the tissue by the device (Figure 6).

12. If a drain is used, manipulate the subcutaneous portion so that it is a maximal distance from the implant.

13. Use caution during skin closure to avoid elevating the scalp tissue off the implant.

14. A gentle pressure dressing may be appropriate upon completion of the case.

**PRECAUTIONS**  
1. The implant ideally lies under hair bearing scalp at the conclusion of the procedure. Placement under forehead or alopecia skin may lead to unacceptable visibility of the device prior to absorption.

2. The patient is to be informed of possible adverse effects including palpability of the device prior to resection, discomfot, and surgical risks. Tenderness and visible fullness over the device for several months has been noted, especially in patients with thin scalps. These symptoms and/or wound problems may lead to a decision to surgically remove the device prior to its full resolution.

3. Local cyst and/or sinus formation may occur and may be treated by aspiration or device removal.

4. High speed drilling (approximately 1000 rpm and greater) and repeat drilling may create holes that are wider than intended for a tight grip of the ULTRATINE Forehead Device. Single pass, low speed drilling reduces the occurrence of this issue.

5. Avoid any movement of the scalp, which may dislodge the tissue from the tines.

6. Support the head when turning or moving the patient.

7. The patient is to be informed of possible adverse effects including palpability of the device prior to resection, discomfot, and surgical risks. 11. Contour irregularities of the skin may be noticeable overlaying the ULTRATINE Forehead Device, especially in non hair-bearing areas.

**ADVERSE EFFECTS**  
Material sensitivity/allergic reactions in patients following surgery should be reported. Implantation of foreign materials in tissues can result in histological reactions. In one case, the device may result in granuloma or become encapsulated. If granuloma or encapsulation is suspected, treatment is recommended.

**Caution:** Federal (USA) restricts this device to sale, distribution, or use by or on the order of a physician.

### ETIKETTERING, EMBALLAGE OG STERILISERING

ULTRATINE pandeenhed-anordningen er steriliseret med gammastrialing. Denne anordning må IKKE resteriliseres. Implantat må kun accepteres, hvis emballagen og etiketteringen er ubeskadigede, når det ankommer fra fabrikken. Må ikke anvendes, hvis emballagen viser tegn på punktur, tegn på at der blevet pilet ved den, vandforurening eller andre beskadelser.

### OPBEVARINGSINSTRUKTIONER

1. Opbevares tært ved stuemodtemp (15 til 24 °C or 60 til 75 °F) og væk fra direkte sollys. Må ikke anvendes efter udløbsdatoen på etiketten.

### BRUGSANVISNING

(til endoscopiske og/eller åbne teknikker)

1. Inden man anvender den, skal den rengøres perstret, så den føle sig behagligt under. Hvis ikke, kan man også vask den i vand med et mildt desinfektionsmittel.

2. Der er en risiko for at der kan være rester af vand i etiketten, når den kommer ud af vandet. Dette skal fjernes ved at tørke den med et tørklæde.

3. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

4. Med højst 40 °C, da der er risiko for at der kan være rester af vand i etiketten.

5. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

6. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

7. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

8. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

9. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

10. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

11. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

12. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

13. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

14. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

15. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

16. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

17. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

18. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

19. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

20. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

21. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

22. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

23. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

24. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

25. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

26. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

27. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

28. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

29. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

30. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

31. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

32. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

33. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.

34. Et desinfektionsmittel skal bruges, når der skal opbevares i en lægeplastisk beholder.
